Question 1 | Correct Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as “No”.

Note: Write a Divide and Conquer Solution

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Sum Value

Output Format

First Line Contains Integer – Element1

Second Line Contains Integer – Element2 (Element 1 and Elements 2 together sums to value “x”)

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>
int findpair(int a[],int l,int r,int x)
{
    if(l>=r)
    {
        return 0;
    }
    int sum=a[l]+a[r];
    if(sum==x)
    {
        printf("%d\n%d",a[l],a[r]);
        return 1;
    }
    if(sum<x)
    {
        return findpair(a,l+1,r,x);
    }
    else
    {
        return findpair(a,l,r-1,x);
    }
}
int main()
{
    int n,x;
    scanf("%d",&n);
    int a[n];
    for(int i=0;i<n;i++)
    {
        scanf("%d",&a[i]);
    }
    scanf("%d",&x);
    if(!findpair(a,0,n-1,x))
    {
        printf("No");
    }
    return 0;
}
```

	Input	Expected	Got	
✔	4 2 4 8 10 14	4 10	4 10	✔

	Input	Expected	Got	
✔	5 2 4 6 8 10 100	No	No	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.
